

Lab Assignment 1 – Smart Event Dashboard

Course: Web Dev II (Advanced JS & React)

Unit Covered: Unit-1

Marks: 2.5

Mode: 100% In-Class (Lab Practicals)

Time: 30–40 minutes

Assignment Overview

The Smart Event Dashboard is a hands-on lab designed to strengthen your understanding of JavaScript DOM manipulation using pure Vanilla JavaScript. In this lab, you will build a dynamic web page that allows users to create, view, interact with, and manage event cards without using any external libraries or frameworks.

This assignment focuses on real-world DOM operations, event handling, and debugging techniques that are essential for frontend development.

Learning Objectives

- Understand and apply core DOM traversal and manipulation methods
- Dynamically create, update, and remove HTML elements
- Handle user interactions using multiple JavaScript events
- Implement event delegation and event bubbling
- Compare `innerText`, `innerHTML`, and `textContent`
- Debug DOM-related issues using browser DevTools

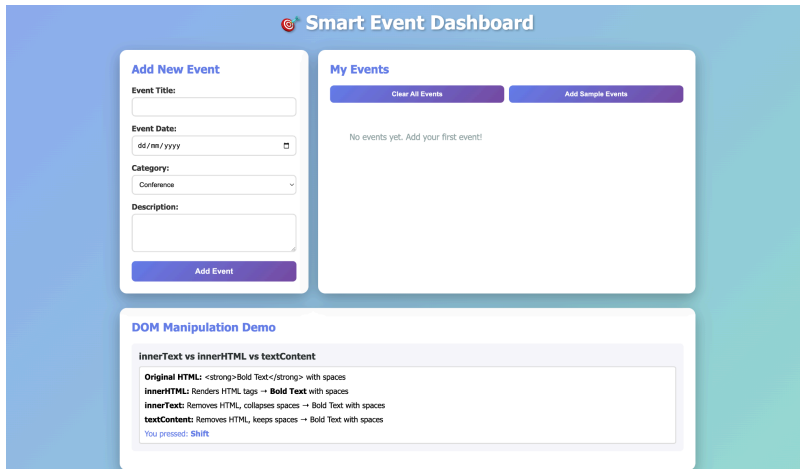

Technology Stack

- HTML5 – Structure of the web page
- CSS3 – Basic styling (no frameworks allowed)
- Vanilla JavaScript – DOM manipulation and event handling

Restrictions:

-  No UI libraries (Bootstrap, Tailwind, etc.)
-  Only plain HTML, CSS, and JavaScript

Functional Requirements

1 Event Creation Form

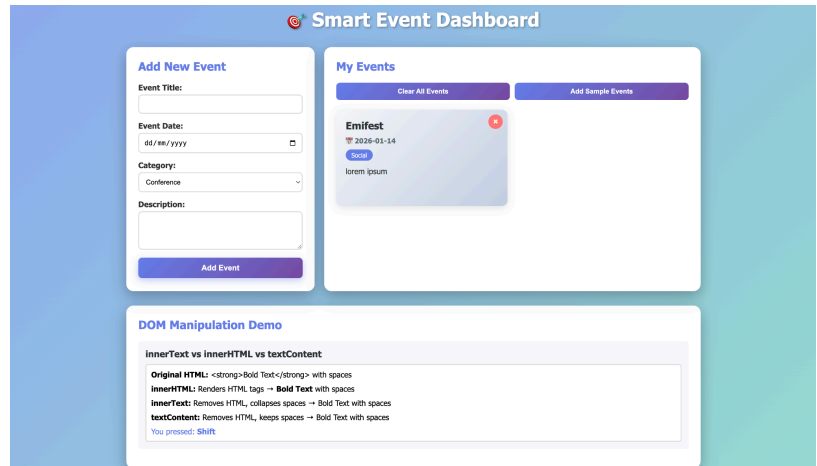

2 Dynamic Event Cards

3 DOM Traversal & Selection

4 Event Handling & Interaction

5 Event Delegation

6 Text & Style Manipulation
